MSc in DIGITAL INTERNATIONAL AFFAIRS

Master of Science (MSc) awarded by and organised jointly with the University of Innsbruck

Analysis of the characteristics and consequences of digitalisation in various areas of international affairs such as diplomacy, international security, international economics or international law and designing digital environments.

- Two years, full-time
- Digitalisation in international relations
- Security, analysis and privacy
- State-of-the art methods and tools for generating and analysing digital data

'The DIA is ideally suited to prepare tomorrow's leaders in diplomacy, politics, public administration and academia for careers in digital environments. This programme offers a unique combination of teaching in two subject areas. First, the programme enhances the understanding of the impact that digitalisation has had in areas such as diplomacy, law, security or economics. Second, the programme allows students to acquire skills in state-of-the-art technologies and methods for generating and analysing digital data.'

Martin Senn
Professor,
University of Innsbruck

'The datafication of int'l affairs is ongoing and becoming increasingly pervasive. The DIA is among the first master programmes worldwide that deals with these epochal changes of our time. Students are exposed to the digitalisation of int'l relations, economics and law, learn how to deal with big data, acquire statistical and programming skills, and apply their knowledge in experiments and visualisations as well as strategies for political communication.'

Markus Kornprobst
Dean, Vienna School of
International Studies
